

Beach Boulevard

INFRASTRUCTURE RESILIENCY PROJECT

The Beach Boulevard Infrastructure Resiliency Project (Project) is being designed to create a multi-benefit solution to protect public infrastructure, recreational activities, numerous homes, businesses, and the community at large, from further impacts due to continued coastal erosion. It aims to replace the current seawall and outdated infrastructure while building climate resilience into the most vulnerable segment of the City of Pacifica's shoreline.

Project Overview

The Project is an infrastructure protection and improvement project that is critical to the public health and safety of the citizens and visitors in and around the historic West Sharp Park neighborhood.

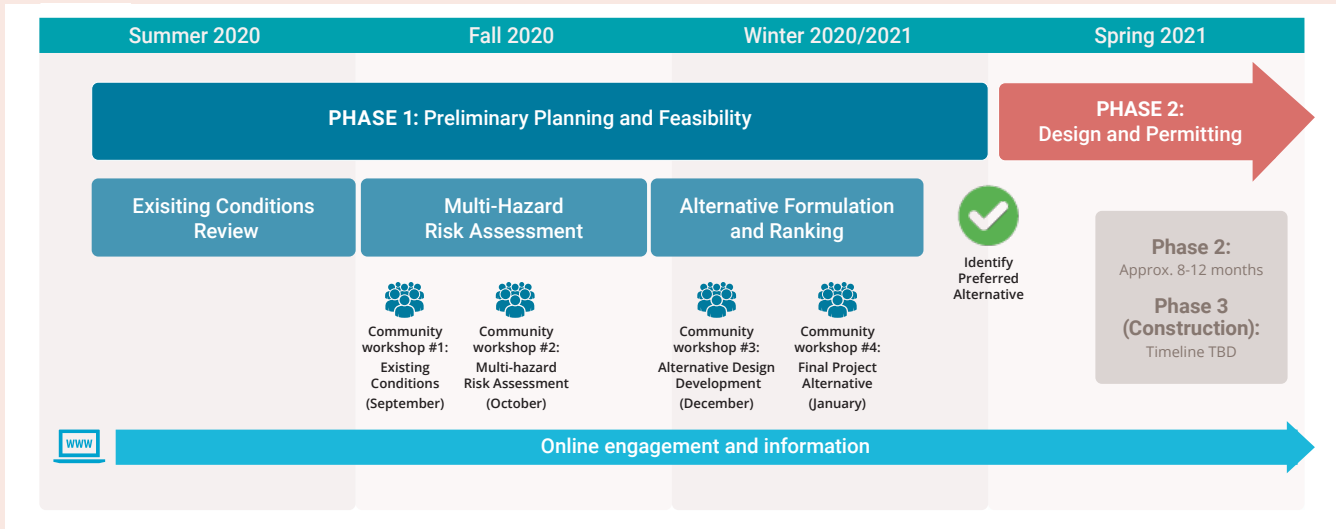

Benefits include:

- Protection of West Sharp Park homes and businesses from overtopping, coastal erosion, and future sea level rise.
- Secured public infrastructure of roads and underlying sewer mains, storm drains and gas and electrical conduit.
- Improved public access to the beach.
- Protection of recreational use on the Promenade for walkers, joggers, cyclists, and others.

Phased Approach & Timeline

The City of Pacifica is kicking off a multi-year process that includes input from the community and stakeholders as it develops the Project. Phase 1 includes the review of existing conditions, projections of future conditions and risks and the development of design alternatives.

Participate in the Process!

The Project represents an opportunity for Pacifica residents and businesses to chart a resilient and vibrant future for West Sharp Park and Beach Boulevard. The City of Pacifica will have an inclusive community process throughout the development of the Project, featuring community workshops, webinars, online surveys, briefings, and more. Your input will help us identify the best solution for Pacifica. **Please sign up on the webpage if you would like to receive notifications about the status of the project and opportunities to provide input.**
